

PRODUCT BLUEPRINT • CONFIDENTIAL WORKING DOC

Beauty marketplace for Zambia

A Yango-style dual-app platform for salons, barbershops, and mobile stylists – with float-based provider monetization and a premium booking experience.

LAUNCH MARKET

Lusaka first → Copperbelt / Livingstone

MODEL

ZANA + ZANA Pro + pro.zana.zm

REVENUE

Provider float packs (job credits)

STACK

Flutter · API · Postgres · MoMo

Follow this document as the source of truth for MVP build decisions.

July 2026

01 Product positioning

ZANA = Zambia's beauty booking marketplace for **salons, barbershops, and mobile hair/beauty pros.**

- Not a full salon ERP like Fresha (inventory, POS, marketing blasts). Borrow Fresha's polish and dual apps; keep ZANA simpler and marketplace-first.
- Mentally: **Yango for hair** – customer orders a service; pro/salon accepts; maps + ratings + trust.
- **Launch focus:** Lusaka first, then Copperbelt / Livingstone.

02 How accounts work

Do **not** make "customer" and "provider" the same messy mode inside one screen.

PIECE	ROLE
ZANA (customer app)	Book, track, rate, pay tip, save favorites
ZANA Pro (provider app)	Go online, accept jobs, manage calendar, buy floats
pro.zana.zm (web)	Apply / verify to become a professional

Same phone number can be both – like Yango passenger vs Yango Pro. Customer signup is always free and instant. Becoming a pro is a separate verified path.

In-app path

1. Customer opens ZANA → Profile → **Become a Professional**
2. Opens web application (or in-app WebView) with requirements
3. ZANA team reviews (docs, photos of work, salon/location proof)
4. Approved → SMS/WhatsApp: download **ZANA Pro** → buy first float → go online

03 Monetization: Floats

Providers do **not** pay per-booking commission at first. They buy **floats** from ZANA.

- Float = pack of **job credits** (e.g. Starter 10 · Pro 30 · Elite 100)
- 1 completed / accepted order consumes **1 credit**
- When credits hit 0 → cannot accept new jobs until top-up
- Buy floats via **MTN MoMo / Airtel Money** (must-have); cash agent top-up later
- Salon/shop accounts can buy **team floats** shared across staff seats

Always show: **Credits left · Expires (optional) · Buy more** – never bury this.

Float revenue loop

04 User types

1. **Customer** – book home visit or salon appointment
2. **Independent pro** – mobile barber/stylist (comes to client)
3. **Salon / barbershop owner** – venue profile, staff, photos, hours
4. **Staff under a shop** – receives assigned bookings
5. **ZANA admin** – approve pros, manage floats, support, disputes

05 MVP features

Booking status chart

Customer app (ZANA) – ship first

- Phone OTP signup (Zambian +260)
- Home: map + list of nearby salons / barbers / mobile pros
- Categories: **Barber · Salon · Nails · Bridal/Events · Mobile**
- Provider profile: photos, services + prices (ZMW), ratings, staff, distance, “At shop” vs “Comes to you”
- Booking: service → stylist (optional) → time → location (home pin or salon)
- Live status: Requested → Accepted → On the way / Confirmed → In service → Done
- Chat/call button (masked number optional later)

- Rate + photo review after job
- Favorites + rebook
- Light offline-friendly screens (spotty data)
- **Become a Professional** entry point

Professional signup (web)

- Type: Independent / Salon / Barbershop
- NRC or passport, selfie, phone
- Portfolio photos (before/after)
- For shops: business name, location pin, shop photos, hours, services menu
- Optional later: PACRA / business permit (not required for MVP independents)
- Status: Pending → Needs info → Approved / Rejected

Provider app (ZANA Pro) – ship second

- Go Online / Offline
- Incoming job card (service, price, distance, client area – full address after accept)
- Accept / Decline · Navigate to client
- Mark Arrived / Start / Complete
- Calendar for salon appointments
- **Buy float** + credit balance
- Earnings summary
- Shop owner: staff list, assign jobs

Admin (simple web)

- Approve / reject pros
- Float packages + prices
- View bookings / disputes
- Seed Lusaka launch providers manually at first

06 Premium UI direction

Brand feel: warm, clean, confident – African beauty premium. Not generic purple SaaS. Not dark cyber neon.

- Strong **ZANA** wordmark as hero identity
- Deep charcoal + warm gold / copper accent + soft cream surfaces
- Expressive brand type + clean UI sans
- Soft map atmosphere, large photography of real Zambian styles/cuts
- Big tap targets, short copy, Zambian English tone
- Motion: map pin settle, booking progress pulse, success moments sparingly
- One job per screen: Discover → Profile → Book → Track

CUSTOMER HOME

1. Greeting + location
2. Search
3. Category row (few icons)
4. Map-first nearby results

PRO HOME

- Online toggle
- Credit float meter
- Next job
- Nothing else fighting for attention

07 Fresha / Yango lessons

TAKE

- Dual apps (customer + business)
- Rich profiles, photos, instant booking feel
- Ratings trust loop
- Simple phone signup for customers
- Separate verified pro onboarding

SKIP FOR MVP

- Full POS, inventory, payroll, marketing blasts
- Complex multi-branch enterprise tools
- Card-only payments (Zambia needs MoMo first)

08 Tech stack (locked defaults)

System map

LAYER	CHOICE
Mobile apps	Flutter (one codebase → App Store + Play Store)
Backend	Node.js (NestJS) or Django + PostgreSQL
Maps	Google Maps Platform (Zambia coverage)
Auth	Phone OTP (Firebase Auth or Africa's Talking SMS)
Payments	MTN MoMo + Airtel Money APIs
Media	Cloudinary / S3 for shop & portfolio photos
Admin + pro apply	Next.js web (pro.zana.zm, admin.zana.zm)
Push	FCM

New project (not inside TradeVerse). Suggested monorepo: **zana/** with **apps/customer**, **apps/pro**, **apps/web**, **apps/api**.

09 Launch sequence

1. **Week 0-2:** Brand, wireframes, float packages, service taxonomy
2. **Seed supply offline:** Onboard 30-50 Lusaka salons/barbers manually (WhatsApp + visits) before public launch
3. **Ship ZANA customer app** with seeded providers (even if Pro app is thin)
4. **Ship pro apply web + ZANA Pro** with float purchase
5. Soft launch Lusaka → App Store / Play Store
6. Expand categories (nails, bridal) once core booking loop is solid

Customers can always sign up freely. Pros grow via in-app link + field team.

10 Trust & safety

- Verified badge after review
- Photo of pro/shop on job card
- Ratings visible; auto-pause low performers
- Report / block
- Clear cancellation rules
- For home visits: share trip/status with a trusted contact (phase 2)

11 Success metrics

- Time-to-book < 60 seconds for returning users
- Provider accept rate > 70%
- Float repurchase within 7 days of credits depleting
- 4.5+ store rating
- Repeat booking rate (the real moat)

12 Immediate next deliverables

- Product wiki: roles, float rules, booking states
- UI design system + key screens (customer home, provider profile, book, Pro online, buy float, become-pro web)
- Scaffold Flutter apps + API + Postgres schema
- Lusaka seed data model (Roma, Kabulonga, CBD, Woodlands, etc.)
